Plastic Leak Alarm System

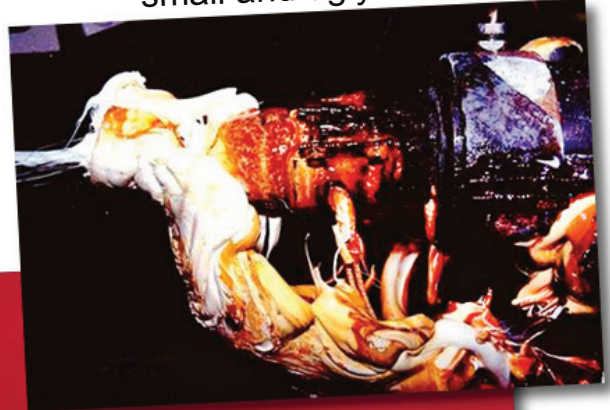

for World Class Manufacturers

very costly Hot Runner Leak - \$20,000

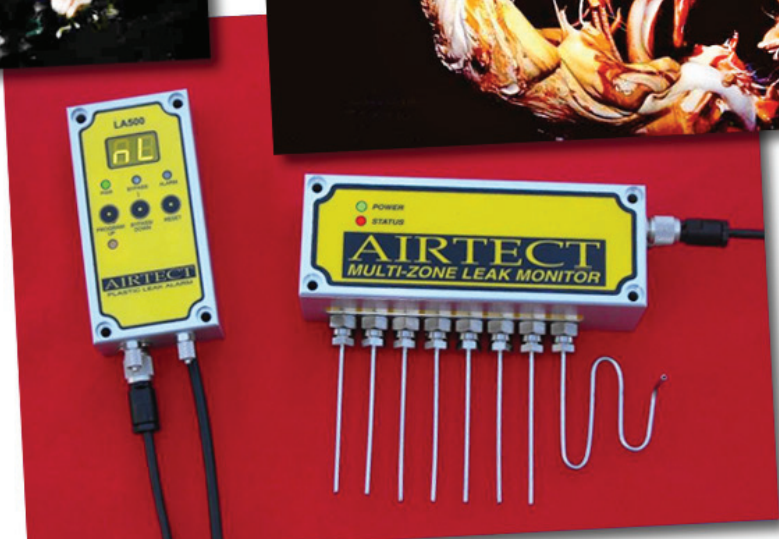

the problem.....

small and ugly Nozzle Leak

.....the solution!

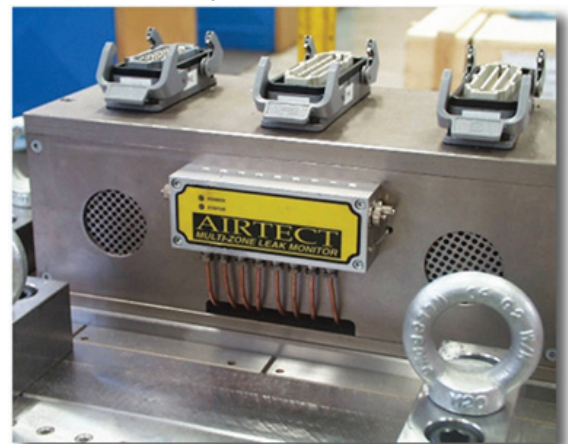

**PERLOS**

**tyco**  
Healthcare

- Nozzle, Barrel, and Hot Runner Mould Protection up to 32-Channels
- Self-Teaching on Start-Up for Optimum Sensitivity
- 2mm Stainless OR 3.2mm Aluminium Sensor Tube with no Minimum or Maximum length
- Tiny Sensor Air Volumes Used
- Each Channel Location Monitored and Displayed
- Rapid Plastic Leak Presence Detection
- Mould Body Temperature Monitored and Displayed
- Fast Payback – saves \$000s
- Easy Installation

a fully protected mould 😊

# AIRTECT

Plastic Leak Alarm System

*'all hot runner systems leak at some stage and it's nobody's fault. The AIRTECT system is an excellent insurance policy'*  
 Proprietor-one of the top Hot Runner Manufacturers

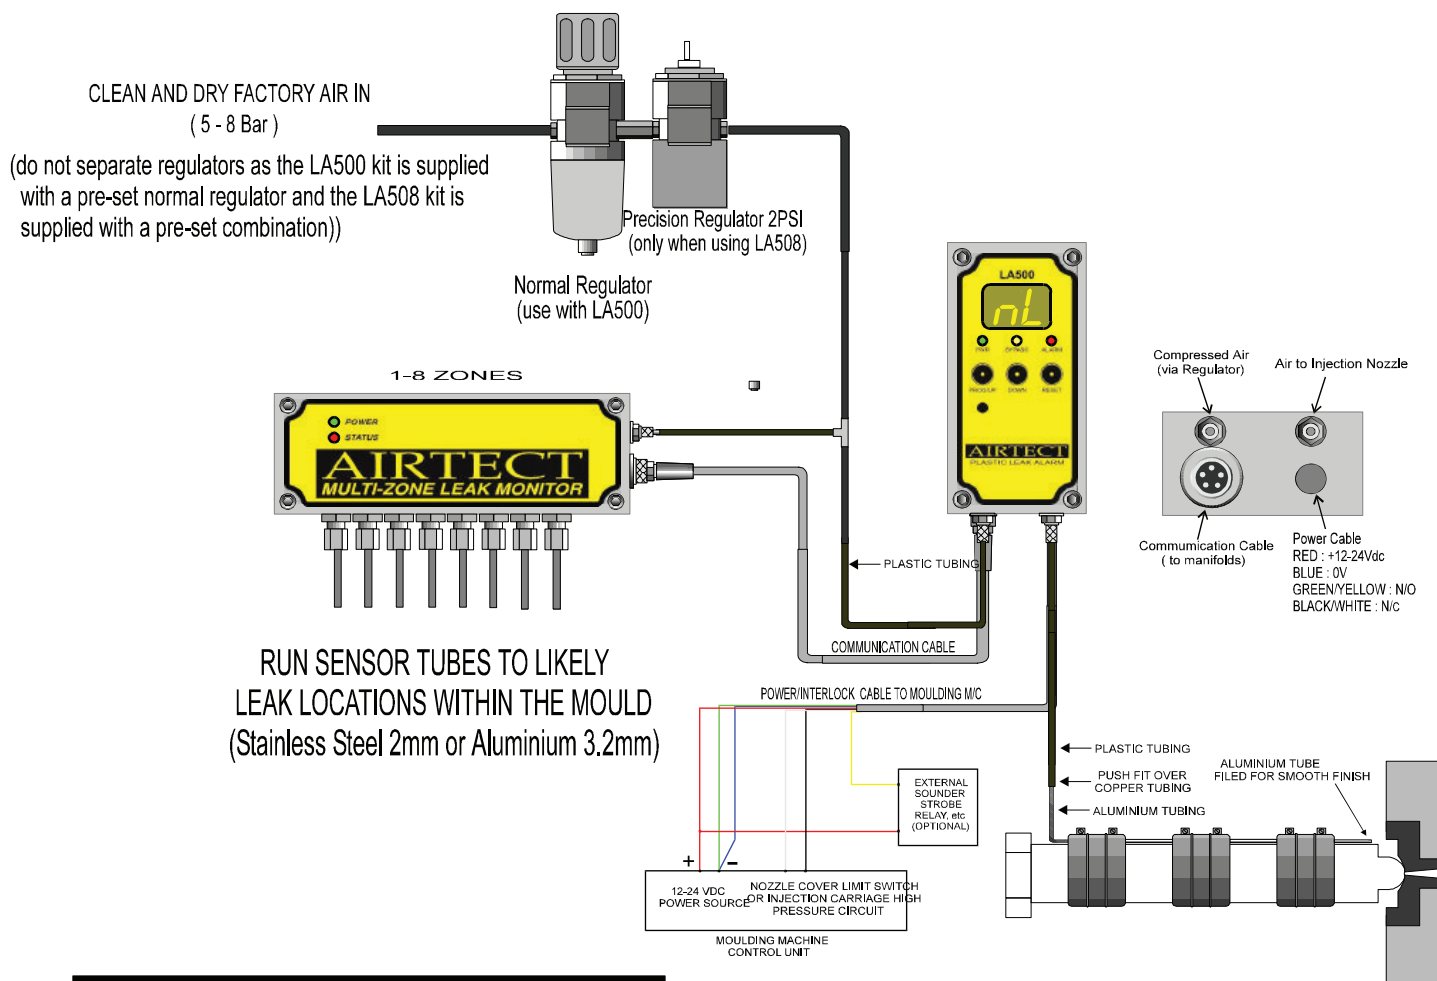

*The Airtect Leak Alarm System is a unique product which provides constant protection against plastic leak damage, either within a high value mould or at the machine injection nozzle.*

*It also protects against running moulds that are under/over temperature.*

*It gives moulders a competitive edge with less downtime and greatly reduced repair costs.*

*It gives early warning of a leak soon after it begins, either deep within a hot runner system or at the main injection nozzle. Location is displayed on LED or LCD Clear Text Display.*

*The manifold unit has a built-in temperature sensor for monitoring the mould body temperature, allowing high/low limits to be set, preventing injecting into a cold mould or over temperature mould.*
